FIR-Sahayak

Multilingual, Voice-First AI-Powered Police Complaint Assistance

The Problem: Writing a formal police complaint can be challenging for people who face language barriers, are unfamiliar with legal terminology, or have difficulty expressing incidents in a structured format. This can make the complaint-drafting process difficult and intimidating.

Our Solution: FIR-Sahayak is a multilingual, voice-first AI-powered platform that helps users prepare structured police complaint drafts in Marathi, Hindi, and English. Users can describe an incident naturally through voice, review the transcription, and receive an AI-generated complaint draft.

Key Features

- Voice-based complaint recording in Marathi, Hindi, and English.
- Speech-to-text transcription using Gnani AI Prisma.
- AI-powered FIR draft generation.
- Detection of missing information through relevant follow-up questions.
- Updated complaint drafts using additional user-provided details.
- Preliminary legal-section suggestions with a confidence indicator.
- Audio playback using Gnani AI Timbre.
- Downloadable complaint draft in PDF format.

Gnani AI Integration

- **Prisma:** Converts spoken complaints into text.
- **Timbre:** Converts generated complaint content into speech.

These technologies enable a more accessible, voice-first user experience.

Technology Stack

React, TypeScript, Tailwind CSS, Python, FastAPI, PostgreSQL, and Gnani AI APIs.

Impact and Vision: FIR-Sahayak aims to make complaint drafting more accessible, particularly for people who are more comfortable communicating in their regional language. By combining multilingual speech AI with structured complaint generation, the platform seeks to simplify the initial complaint-preparation process.

Project: FIR-Sahayak
Challenge: Great Indian AI Internship Challenge
Organized by: Gnani AI

Note: FIR-Sahayak assists with complaint drafting. It does not officially register an FIR. Legal-section suggestions are preliminary references and require verification.
